**DETAILED ACTION**

This office correspondence is response to A Request for Continued Examination filed January 25th 2010

Claims 4 - 8, 41 – 45, 80, and 81 are pending.

**Reasons for allowance**

The following is the examiner's statement of reasons for allowance:

There is no teaching or suggestion in the prior art of the combination of claim limitations, among other things, as presented in claims 4 - 8, 41 - 45, 80, and 81 specifically that predicting the number of distribution demands, which predicts the number of demanded distributions within the time period for each minimum unit category, based on the information on the viewing history of all viewers,

The prior art doesn't teach or suggest calculating the number of planned distributions, which calculates the number of planned distributions of each advertisement for each minimum unit category, so as to balance the number of desired advertisements of each advertisement for each minimum unit category and the number of requested distributions for each minimum unit category, also the prior art fails to teach when performing random extractions, applies a handicap, based on the information about specification of increasing or decreasing, each time to the remaining number of distributions of each advertisement comprised by each advertising list, so that the mean extraction probability is maintained over the time period, while causing a deviation in the extraction probability distribution between each advertising list at each random extraction.

This is found in Applicant's specification on page 6, lines 20 - 33, page 7, lines 5 - 30, and on page 8, lines 5 - 30.

The closest prior art found by the Examiner is the previously cited Kida et al., and Inoue et al and Kindo et al.; however, this combination of references does not teach or suggest that calculating the number of planned distributions, which calculates the number of planned distributions of each advertisement for each minimum unit category, so as to balance the number of desired advertisements of each advertisement for each minimum unit category and the number of requested distributions for each minimum unit category, The prior art doesn't teach or suggest when performing random extractions, applies a handicap, based on the information about specification of increasing or decreasing, each time to the remaining number of distributions of each advertisement comprised by each advertising list, so that the mean extraction probability is maintained over the time period, while causing a deviation in the extraction probability distribution between each advertising list at each random extraction. For these reasons, in conjunction with the other claim limitations puts this case in condition for allowance.
